

AREXA

SEE THE FUTURE

ARTIFICIAL EXCHANGE ANALYST

Meet AREXA, the next-gen artificial intelligence: a trading oracle that, based on her predictive indicators and immense database, calculates the most likely future price action of Bitcoin and other cryptocurrencies. An oracle that literally sees the future - and shows it to you!

AREXA will be released to the public in closely supervised phases.

PHASE I.:

In phase one, her predictive trading platform will provide users with an unprecedented edge in the market. Forget traditional trading indicators and old-school TA; a brand-new chapter in trading begins here.

PHASE II.:

In phase two, the AREXA alert system will be released, providing users with automated daily BUY and SELL signals for various cryptocurrencies.

PHASE III.:

Finally, in the last phase, AREXA's sophisticated neural network will autonomously manage trading for platform users - all by itself.

HOW DOES AREXA WORK?

The universe is abundant with fractal geometric constructions: from a simple fern plant to the spiral arms of galaxies, fractals permeate everything, including the price action of cryptocurrencies.

What the AREXA oracle does is recognize these fractal geometric 'superwave' patterns in the market's price action. Once these principles are decoded, a set of indicators can be created - indicators that predict themselves into the future.

Subsequently, by analyzing these predictive indicators, a powerful neural network compares past and present market patterns and occurrences, generating the most likely version of the future... and based on it, providing accurate trading signals for the AREXA users.

**IF YOU WANT TO FIND THE SECRETS OF THE
UNIVERSE, THINK IN TERMS OF ENERGY,
FREQUENCY AND VIBRATION.**

NIKOLA TESLA

SEE THE FUTURE

Let us show you what we're talking about!

In the top image, you can see AREXA's price prediction for BITCOIN from a few days ago. This prediction is a result of a dozen underlying indicators, created by AREXA...

...and in the bottom image, we can see how the price of BITCOIN played out following our prediction.

This accomplishment is made possible by the powerful fractal geometric predictive indicators of the AREXA system, which compare present patterns with a vast database of past price action. Based on past occurrences, it creates the most likely outcome for the future.

TIMELINE TO SINGULARITY

1: The AREXA System is a tried and tested **profit making strategy**, utilizing the laws of applied fractal-geometry. If we teach this to traders, that creates a strong self-fulfilling prophecy. The more people use it, the more the market behaves according to our predictions.

2: To focus on the work (and actually, to stop trading), we require funding. Primarily, to **employ AI specialists** who can manage the creation of AREXA.

3: In return, we will **release AREXA AI tokens**. Owners of these tokens will be eligible to receive a percentage of the profit generated by the AREXA AI.

4: We create a TOOL for the traders, and their success spreads awareness about AREXA. The traders will, **instead of Tradingview**, use this new platform – one that doesn't just show charts, but can actually **predict the future** for traders. The platform will produce never before seen predictive indicators.

5: With the AREXA platform, a **market is created**. Traders have to have subscriptions to use the platform. The income from these subscriptions will go into the AREXA pool – and shared amongst the AREXA A.I. token holders, on a monthly basis.

6: Naturally, AREXA A.I. tokens can be traded, and as their number is limited, their price will increase over time. Especially the price of the special **'AREXA MAGIC' coin**, of which only 100 were minted. Whomever owns one of these tokens, gets lifetime access to the AREXA A.I. platform.

7: The AREXA system advances and as **the AI matures**, it starts giving BUY and SELL alerts for the users. This will be the second level of our subscription, more expensive than the first one. Income from here, yet again, goes into the AREXA POOL.

8: Then the **AREXA AI goes automated**, and through an API protocol, will start trading with the platform users Binance account. First spot. Then, leveraged. And in return, users will have to pay in 10% of their profit to the AREXA POOL.

9: AREXA A.I. Token holders will get a **passive, growing income** from all the subscriptions.

10: The AI itself gets better and better at trading as it perfects itself with the help of past data... eventually becoming better than the best human traders, and thus, **reaching singularity**.

**ANY SUFFICIENTLY ADVANCED
TECHNOLOGY IS INDISTINGUISHABLE
FROM MAGIC.**

ARTHUR C. CLARKE

TOKEN PRESALE - 2024 Q1

Apart from the cutting-edge neural network of the AREXA AI, some of the latest blockchain technologies had been implemented in the tokenomics. There will be two AREXA tokens and three subscription tokens, each with unique benefits for the users. Each tier has different pricing and different features. Think of them as keys that give you access to different levels of the same building. As it is outlined in the whitepaper, the AREXA team is developing a whole new concept for how to use NFTs - simply put, the goal is to integrate business features into them.

AREXA AI TOKEN		Total supply		100 000 000
Pool type		Pool		
First release	50%	Marketing pool	10%	5 000 000
		Development pool	10%	5 000 000
		Arexa Inc. reserve	10%	5 000 000
		Investor's pool	70%	35 000 000
Reserve	50%	Smart contract pool	100%	50 000 000

AREXA A.I. TOKEN (RXAI)

This tier is the backbone of the project, with a limited supply of 100 000 000 tokens – half of which will stay locked, and left to the community to decide it's fate.

The holders of these A.I. TOKENS will **earn income from the monthly subscriptions**, based on the percentage they hold of the overall pool - meaning, when automated trading goes live, they will **earn a percentage of every trade AREXA makes**.

This token also comes with voting rights on the development of future AREXA features.

The price of the AREXA A.I. TOKEN is **0.1 USD / TOKEN**

AREXA MAGIC TOKEN (RARE COLLECTIBLE)

The AREXA MAGIC TOKEN is limited to 100 tokens only and is reserved for our most dedicated and hardcore contributors and followers. With these tokens, you will have **lifetime, unlimited access** to the predictive AREXA platform, the BUY/SELL alerts and our Telegram & Discord channels.

This token also holds a special power: only the holders of these 100 tokens can propose in which direction AREXA should be developed in the future

The price of the AREXA MAGIC TOKEN is **100 USD / TOKEN**

AREXA SUBSCRIPTIONS

Access to the various features of AREXA is granted through the following tiers. The revenue generated from these tiers, including the profit percentage generated by automated trading, is directed to the AREXA A.I. TOKEN pool and distributed among token holders.

I.: ORACLE TIER - 2024 Q2

Designed for users seeking a limited-time experience of our platform's predictive capabilities. With these AREXA tokens, you gain 30 days of access to the predictive indicators on the AREXA platform. Additionally, access to our Telegram and Discord channels is provided, offering direct access to learning materials and assistance.

II.: EDGE TIER - 2024 Q3

In addition to Tier I features, this tier offers predictive signal alerts. AREXA will notify you of potential solid long or short opportunities in the markets, ensuring you don't miss any day or night trading situations. This token also grants a 30-day access to the predictive platform.

III.: SINGULARITY TIER - 2024 Q4

This token unlocks the ultimate feature: the automated AREXA trading AI, managing your portfolio across exchanges like Binance, Bitfinex, and others. Visualize daily spot trading with 1-3% profit, dynamic stop-loss, and take profit mechanisms. Holding more tokens means AREXA will trade larger funds for you. Moreover, these tokens only expire after reaching a certain profit threshold. Tier III includes access to Tier I and II features.

ROADMAP

AREXA PRESALE
2024 Q1:

Magic token
release

AREXA AI token
release

AREXA PLATFORM
2024 Q2:

Predictive Platform
launch

Tier I. (Oracle)
token release

AREXA ALERT
2024 Q3:

BUY/SELL alert
function goes live

Tier II. (Edge)
token release

AREXA AI
2024 Q4:

Automated trading
function goes live

Tier III. (Singularity)
token release

THE CORE TEAM

VIKTOR GAAL

PSYCHOLOGIST
PRO CRYPTO TRADER

Over the past five years, Viktor has refined his trading system to a highly profitable level. Now he's training the neural network of AREXA - to make it even more successful than himself.

USMART NINJA

BLOCKCHAIN DEVELOPMENT

The uSmart Ninja is a group of experts with many years of experience in implementing high complexity financial systems and a passion to design complex algorithms. Their main focus in the AREXA world is cryptography, smart contract and the design of the whole ecosystem from IT perspective.

ATTILA LUKACS

HEAD OF ARTIFICIAL
INTELLIGENCE DEVELOPMENT

Attila established himself as a skilled programmer, but then turned his focus to the field of AI research. He's proficient with the state-of-the-art LLM models and diffusion models and is the leading developer of the cognitive architecture of AREXA.

THE FOUNDER

VIKTOR GAAL (44)

1992: Built his first computer.

2000: Got his first novel published at age 21.

2001: Got accepted into the MENSA International Club.

2006: Got an MSc in Psychology.

2014: Lived and worked in London as a psychologist for over 8 years.

2016: Established the RED Academy where he trains RED method life coaches.

2017: Started trading crypto.

2018: Got his tenth novel published (Battleground ZERO) by Libri, the biggest publishing house in Hungary.

2019: Developed the fractalgeometric superwave theory, which is the basis of his trading method.

2020: From the profits of his first bull run, built a 1megawatt crypto mining farm.

2022: Established AREXA Fzc, which serves as a crypto trader's academy and the startup-company of his AREXA Artificial Intelligence project.

FUN FACTS:

- Practiced kung-fu and archery.
- His favourite PC game is Civilization, but also plays State of Decay and DAYZ (with his son).
- Has appeared as a psychologist in various TV shows (Big Brother, The Bachelor, Married at First Sight, etc.).
- Has written five filmscripts and plans to turn them into movies.
